

CONSTITUTION AUTHORING & PUBLISHING

Statute

Statute is where the rules an organisation wants its agents to follow are authored, versioned and published as a constitution – and bound to what the foundation actually enforces, so policy and intent can't drift apart.

WITHOUT IT

The rules an organisation wants its agents to follow live in documents, Slack threads and tribal knowledge. What's written down and what's enforced drift apart, and no one can point to the version that was in force when something happened.

WITH IT

Those rules are authored once, published as a versioned constitution, and bound to what the foundation actually enforces at evaluation time – so intent and enforcement stay the same thing, and every version is on the record.

WHAT IT IS

Constitution authoring & publishing

PRODUCES

A versioned, published constitution

BINDS TO

The policy engine at evaluation time

STAGE

Pre-release · deployment in progress

WHERE IT FITS

Statute is how an organisation's intent enters the stack: a constitution the whole foundation evaluates against, versioned like code.
